Does Your Portfolio Adapt to Changing Markets?

Investment Strategy

The **Pinnacle Multi Strategy Core Fund** utilizes a systematic and fact-based process, driven by Pinnacle's proprietary market risk indicators and investment rankings, in an effort to **participate in uptrending equity markets** while seeking to **mitigate risk in down trending equity markets**. Rankings are performed monthly on sectors, global asset classes, and individual stocks and 4 market indicators are used for risk mitigation. During normal market risk conditions the fund is fully invested in **3** equity sleeves: **50% global asset class rotation, 25% US sector/expanded sector rotation, 25% individual equities**. Pinnacle's rankings determine the positions in each sleeve on a monthly basis. During periods of elevated risk, determined by the 4 market risk indicators, the fund will move to varying levels defensive positions (e.g. cash/cash equivalents, government bonds).

Please review the Fund's Prospectus for more detail on the expense waiver.*

* The Morningstar US Fund Tactical Allocation® is an asset weighted category average of US based open end mutual funds that Morningstar has assigned to this category. Returns do reflect the internal fees and expenses of the funds included in this category but returns do not reflect any sales charges. The Dow Jones Moderately Aggressive Portfolio Index® is a global benchmark that takes 80% of the risk of the global securities market. It is a total return index that is a time-varying weighted average of stocks, bonds, and cash. The index is calculated on a total return basis with dividends reinvested. The S&P 500 Equal Weighted Total Return® index measures the performance of the large cap U.S. equity market, it has the same constituents as the capitalization weighted S&P 500, but each company in the index is allocated a fixed weighted of 0.2% at each quarterly rebalancing. It is capitalization weighted. Indexes and category averages are not available for direct investment.

IMPORTANT FUND INFORMATION

Mutual Funds involve risk including the possible loss of principal. ETF's are subject to specific risks, depending on the nature of the underlying strategy of the fund. These risks could include liquidity risk, sector risk, as well as risks associated with fixed income securities, real estate investments, and commodities, to name a few. In general, the price of a fixed income security falls when interest rates rise. The Fund may invest, directly or indirectly, in "junk bonds". Such securities are speculative investments that carry greater risks than higher quality debt securities. Investments in lesser-known, small and medium capitalization companies may be more vulnerable than larger, more established organizations. Investments in foreign securities could subject the Fund to greater risks including, currency fluctuation, economic conditions, and different governmental and accounting standards. Increased portfolio turnover may result in higher brokerage commissions, dealer mark-ups and other transaction costs and may result in taxable capital gains.

There is no guarantee that any investment strategy will achieve its objectives or avoid losses.
